YOUR ULTIMATE
SECURITY COMPANION

▲ While designed for security, the security needs to look good too. Inside and out. It's a way of giving you confidence that you are protected.

Uniquely designed as an alert panel in first-rate quality housing, Device4U Panic Button system provide tamper and vandal-proof protection and easily integrates into your access control system for monitoring. Emitting a modulated signal that is instantly distinguishable from other alarms, there is absolutely no doubt that potential threat be warned off your property.

Easy to install and inexpensive, Device4U Panic Button offers a panic call system which can be discrete and which delivers you accurate protection when you require it most.

Features

▲	**Quick**	- to install and configurable to any access control system.
▲	**Cost Effective**	- rugged and visible design yet equally powerful compared to other alert panels.
▲	**Manageable**	- on your existing network with low bandwidth usage.
▲	**Customizable**	- alarm messages, icons and sounds in the Comman Centre for panic alert.
▲	**Reporting feature**	- lets you add notes to incidents and import them to a text file.

Applications

▲ Security Buildings	▲ Long Corridors	▲ Banks	▲ Casinos
▲ Car Parks	▲ Staircases	▲ Courthouses	▲ Cashier Counters
▲ Service Counters	▲ Shopping Malls	▲ Hospitals	▲ Prison Facilities

See First – Understand First – Act First

- **See First** — Security devices installed to deter crime
- **Understand First** — Communication system used to send and receive alarm signal
- **Act First** — Immediate measure taken to access exact point of alert

How Does It Work

- When the panic button is pushed, an input signal is sent to an Input Controller Unit which automatically transmit the signal to the building central alarm monitoring system. Each Device4U panic button is configured with a unique identity that enables accurate message to be sent to the Command Control room for fast response. Alarms received can include the floor, room number and/or aisle location and if required a door access point depending on where the system is implemented.

  Each Command Centre can identify up to unlimited number of Panic Button inputs and outputs. Depending on the area of application, building owners have the option of integrating a siren to the panic button alert. To ensure the effectiveness of the security response team, the alarm can only be acknowledged or processed by an Operator with the right privileges. The system will process the active alarm with an action pane pop-up for Operators to record details of the alarm trigger for audit trail purposes.

Benefits

- **Empowers** organizations to "own" the security for their workers, clients and workplace.

- **Improves** the safety and security of your organization and peace-of-mind of your employees.

- **Prevents** situations from escalating into threatening, dangerous, or tragic events.

- **Expands** your ability to accurately assist where help is required
