

Functions

Main Features

Diversification of Access Terminals

- Support global access to massive devices, high performance, and concurrency
- Distributed deployment of application servers, support millions of devices connected with long-distance

Remote Control

- Powerful remote transparent transmission function, to achieve the function of the upload and download files & firmware
- Reduce the maintenance cost of engineering and technical support

High Data Security

- Equipment and platform through encryption transmission to improve data security
- Support privatization deployment, improve the security of relevant data
- Record the operation log for easy access to the operation history

Convenient Management

- Provide remote configuration, remote upgrade, remote transparent transmission
- Based on B/S architecture, can be accessed from anywhere through Web
- The device can be displayed on a map for easy to check location information

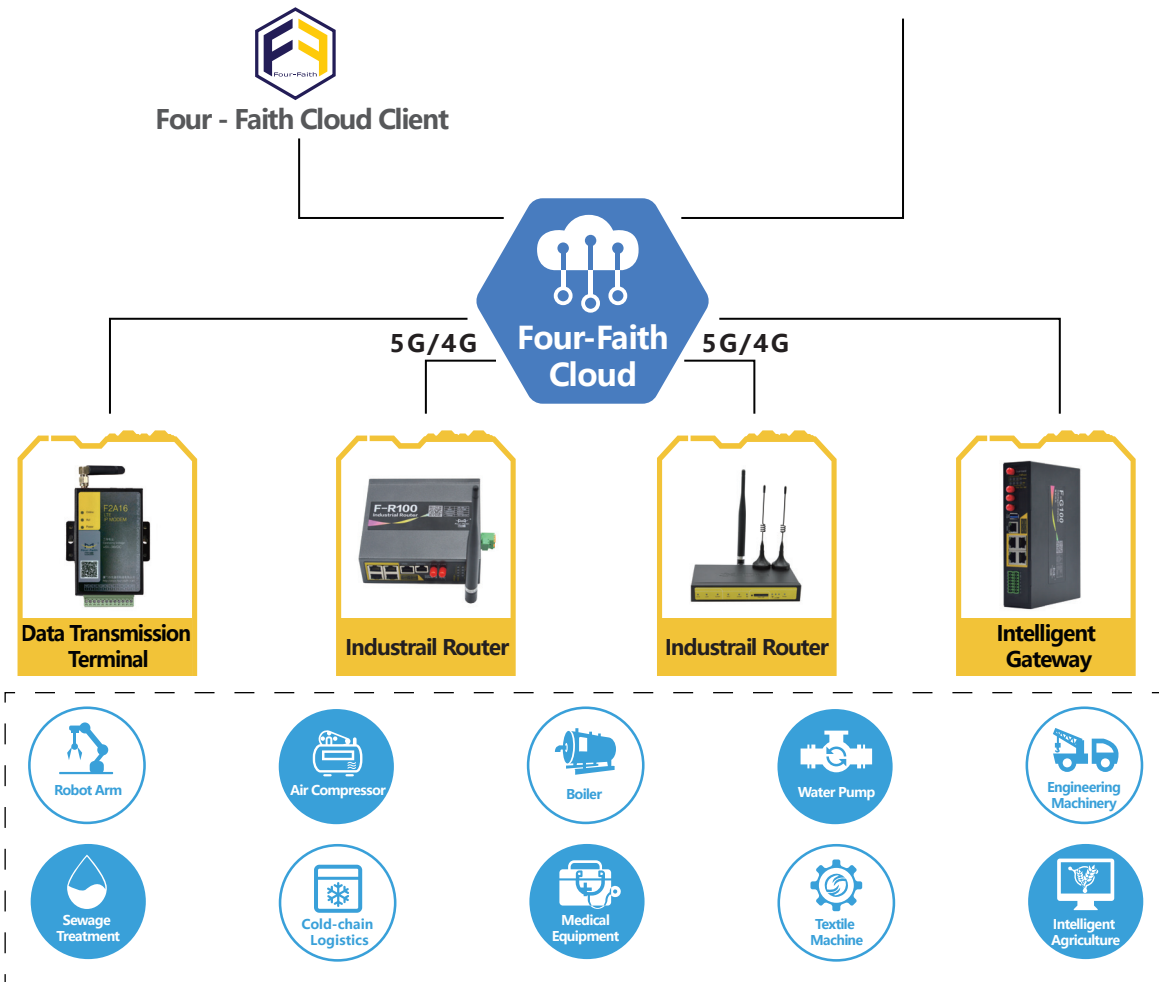

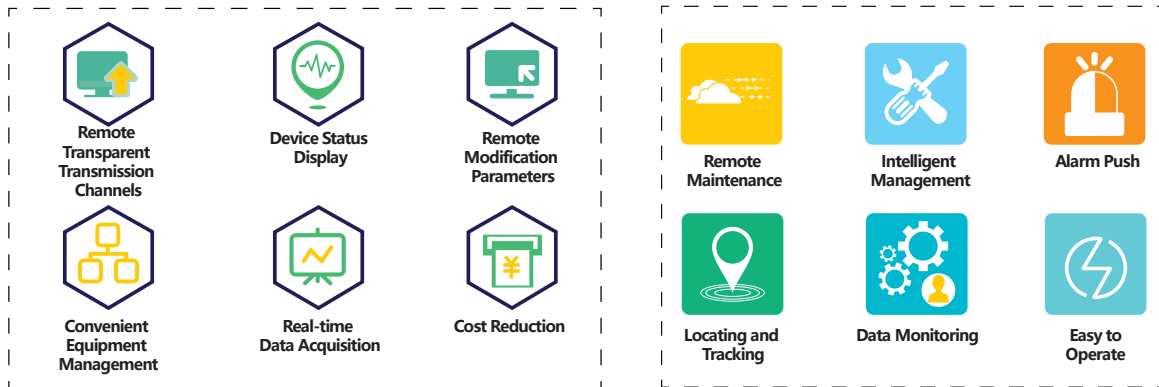

Enrich Authority Division

- Administrator: Can view all devices, can operate all the devices, and assigns authority
- Operator: Can edit device information and add equipment
- User: Only be viewed and monitored the devices

Platform Connection and Openness

- Provide cloud platform for connecting third party platform's API
- Can achieve the data interaction with the third party platform

Applications

Smart Manufacturing

Smart Retail

Smart Environmental Protection

Smart Agriculture

Others
