

ZK Software is a leading manufacturer of biometric readers for access control and time and attendance applications. And we are the choice for OEMs, ODMs, distributors, integrators and dealers.

We have our own in-house facility for research, development, design, production and sales – a 500,000 square foot plant with ISO9001:2008 certificate, total 1,200 employees in China and branch offices in USA, Spain, Brazil, South Africa, Thailand, Dubai, India, and Turkey. With our own enclosures and biometric optic manufacturing facility we can meet any custom design and manufacturing demand from OEMs and ODMs at a very low price.

ZK Software is well known for having the industry's fastest patented biometric matching algorithm, which is used by over 180 million users, on more than 5 million access control and time and attendance readers, in more than 160 countries worldwide.

We are the leading supplier, producer and manufacturer of Biometric fingerprint readers. We achieve this because we have the fastest matching algorithm, the largest number of features, easy to customize, reliable and all at the lowest cost.

over five million units sold...

...serving customers in 160 countries

Time & Attendance

From an office with two employees, to a large manufacturer with 50,000, every organization has to track the work time of its employees, control access to certain areas and ensure identity of staff or materials. Because every industry is different, ZK Software offers a large selection of Time & Attendance solutions to manage such time.

Access Control

Restricting access to sensitive areas by controlling key access points is important to organizations. ZK Readers help companies maintain security through efficient and reliable Access Control. Using card and fingerprint ZK Readers, time can authorize which staff can open which doors on specific days or times.

Hotel Check-in

A simple touch of an ID card, or touch of the finger, enables guests of major hotels and resorts to access and secure rooms and facilities using our Readers.

Airport Security

ZK Readers protect passengers, aircraft and cargo of airports worldwide by restricting access to secure areas. Only authorized staff can gain entry via face, fingerprint and/or flash card identification.

Crowd Control & Management

At large events, crowd control and management is a major challenge. Our products are integrated with applications that read and register the tickets of concertgoers, permit only authorized staff to enter secure areas and track time.

Locker Control

At fitness clubs, airports and storage facilities, ZK Readers work with industry applications to ensure access to lockers and protect valuables, while also offering easy access for locker users.
