

IDVision

Modular personalisation solution for smartcards - price sheet

Ready to use building blocks

IDVision is a modular Software Development Kit (SDK), that offers you an entire integrated personalisation solution for smartcards.

Third party applications can use IDVision to enhance their functionality.

The modular structure of IDVision provides a flexible solution for different workstations.

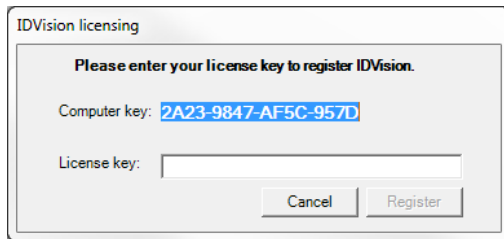

The licence model is based upon the principle "pay for use", the user pays only for the installed modules.

Key features

- Pricing "pay for use"
- No hardware copy protection
- Easy to enhance
- Professional helpdesk and support

Software registration

Once installed, the software has to be registered in order to obtain a licence key. This licence key allows the use of the ordered modules of IDVision.

It is easily possible to enhance any installed version of IDVision in order to use additional functionality.
