

SOLUTION

IDVision

Modular personalisation solution for smart cards

Ready to use building blocks

IDVision is a modular Software Development Kit (SDK), that offers you an entire integrated personalisation solution for smart cards.

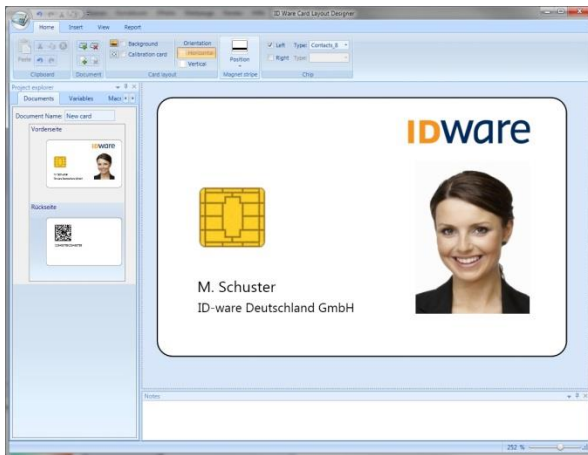

Third party applications can use IDVision to enhance their functionality.

The modular structure of IDVision provides a flexible solution for different workstations.

Key features

- Graphical Layout Designer
- Hardware independent card printing with optional encoding of all kind of smart cards
- Photo acquisition supports digital cameras and Live-View
- Secure web service communication (no ActiveX, Silverlight or Flash)
- Modular structure for high flexibility

Graphical Layout Designer

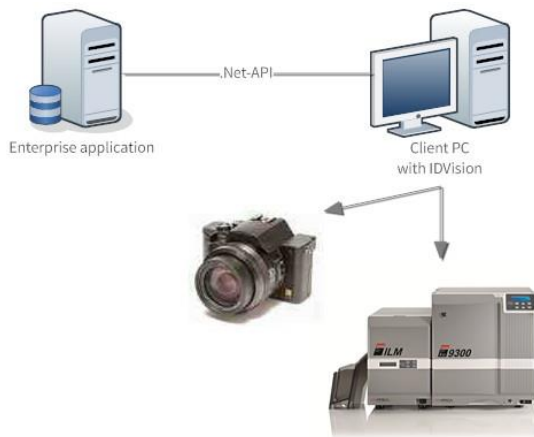

The graphical Layout Designer enables you to create and maintain all kind of card designs on a user friendly way.

The integrated Macro-Engine is a strong tool to process also complex and dynamic data content.

To have a high efficiency on maintenance, different card designs can be managed in only one project file.

Interaction with existing infrastructure

Functionality of IDVision can be addressed through .Net-API without using unsafe technology like ActiveX, Silverlight or Flash.

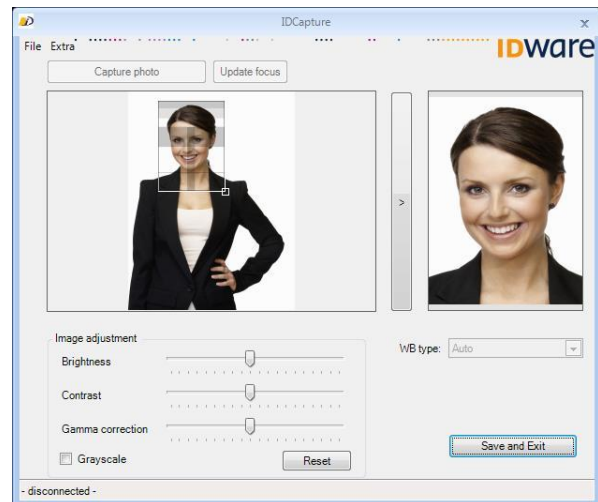

Integrated function calls start different modules of IDVision and execute the requested action.

Modular structure for high flexibility

Photo acquisition

IDCapture – Solution for directly capture of photos for individual card personalisation.

Additional to automatically camera control, photos can be imported from file and scanner. Cut and adjustment features finalise the photo acquisition.

Card printing

IDPrint – Solution for hardware independent card printing.

Card encoding

IDDESFire und IDLegic – Solution for encoding of Mifare and Legic smart cards.

Technical Requirements

- Microsoft Windows operating system (Windows XP – Windows 7)
- Microsoft .NET 3.5
