

# Access Control System (Incl. Time & Attendance Management System)

Hello ?

We are a company that develops and manufactures access control system. The product is a product developed by a technician with development experience and knowledge of the same kind industry over ten years. Our access control system can be managed remotely by mobile phone as well as PC screen installed in the field.

Access control system means to limit the number of people entering the important places and to keep the access record data in order to secure a comfortable space and safety.

The main purpose of access control is to protect private property from unspecified number of people, security of belonging personnel, blocking of information leakage, and efficient management of facilities

Time and attendance management means storing and managing data on the attendance and absence of the members of the organization. It can be used for salary or promotion as a key element of personnel evaluation.

Mobile phone management means that the contents of the PC screen installed and operated by the access control software can be viewed and managed remotely from the mobile phone.

The product and software of our company's access control , and time & attendance management system are as follows.

**(Fingcas Products)**

**(Fingcas Software)**
