

IPSecurityCenter™ for Corporate Enterprise Solutions Guide

Mitigating risks to people, property, infrastructure and data while managing costs is a complex challenge for corporations

**Prepare for a better tomorrow with a future-proof platform
that can do so much more for corporate enterprise security
applications**

The number of connected sensors is expected to exceed 300 billion by 2020, the security industry spends \$2.7B a year on R&D. We assist organizations deploying new technologies to help manage security risks across the enterprise. We make sense of the vast volumes of data produced by these systems whilst maintaining optimum control of security operations.

Centralized management and control of your local, national and global security infrastructure can support risk mitigation and drive significant efficiencies for security operations.

YOUR SECURITY SYSTEMS CAN DELIVER GREATER VALUE TO YOUR ORGANISATION

IPSecurityCenter is used by corporations worldwide and this provides us with valuable insights into the specific challenges encountered in integrating different system and aggregating key data to support decision making. Corporate organizations using IPSecurityCenter benefit from:

- Highly efficient, interconnected operations using tiered control rooms that manage multiple locations and functional areas, such as the access control, building management services and maintenance schedules from a unified Operation Center
- Ensure greater collaboration between facilities, maintenance, and security teams through our workflow engine & common operating picture for improved detection and quicker response times

- Visualize the health of your system through customizable dashboards to give you deeper insights into issues that affect your system performance and compliance with airport standard operating procedures
- Proactive emergency preparedness, better emergency planning, and management of security and facilities
