

IPSecurityCenter™ for Port Security

Solutions Guide

Protecting our sea ports from illegal goods, drugs, human trafficking and terror threats, while ensuring the efficient processing of cargo to remain competitive

Prepare for a better tomorrow with a future-proof platform that can do so much more for port security applications

Ports across the globe face some of the most challenging operating conditions they have ever seen. In recent years port operations have seen reducing profit margins, more customs legislation and an increasingly challenging border security landscape.

Keeping port property, staff, cargo and passengers safe, while ensuring operations move at the pace required to keep a port competitive is a challenge for all operators. At the same time, the convergence of technology and processes have made port operations and port security integral and interdependent, creating both challenge and opportunity.

MORE THAN EVER, PORT SECURITY NEEDS TO SUPPORT BUSINESS EFFICIENCY

IPSecurityCenter is in Our experience with port operators enables us to solve problems and reliably drive security and operational efficiencies in port environments across the world. Our open platform approach not only allows the integration of legacy security systems but can provide connectivity to port operating systems to support overall business performance. Port operations using IPSecurityCenter benefit from;

- Through correlation of data from multiple security technologies improve detection and quicker apprehension times of suspicious goods and individuals and collaborate with partner organizations by securely sharing subsets of data using our customizable interface.
- Visualize all elements of your security posture

and utilize our customizable dashboards to give you deeper insights into port operations and keeps goods moving faster through export and import customs clearance processes.

- Create tiered control rooms that can manage multiple locations and functional areas such as clerk inspection, security inspection, container inspection and X-Ray screening from a unified Global Security Operation Center ensuring compliance to processes leading to reduced inside threats
- Decision support for better resource planning ensuring greater collaboration between border protection, customs, maintenance and security teams through our workflow engine.
