

# IPSecurityCenter™ for Rail & Metro Security

## Solutions Guide

**Providing a Safe and Secure Public Transportation Network Whilst Supporting Operational Performance Targets and Managing Growing Passenger Numbers**

**Prepare for a better tomorrow with a future-proof platform that can do so much more for rail & metro security applications**

Rail security systems are large, complex and generate a huge amount of information. The use of data from security, life-safety systems, ticketing systems and gate lines help to improve uptime, support revenue protection and increase passenger safety and satisfaction. However, gaps in this intelligence can negatively impact train operating companies' performance and create significant costs for rail operators each year.

## YOUR SECURITY SYSTEM SHOULD BE A STRATEGIC ASSET TO YOUR OPERATIONS

IPSecurityCenter™ has been designed from the ground up to integrate, decipher and manage the huge amount of information created by security technologies, PA/VA and gate line systems in today's fast-moving rail landscape. It allows rail operators to leverage their security systems and visualize critical information, providing greater real-time situation awareness. Metro and rail operations using IPSecurityCenter benefit from;

- Complete integration of sensors, devices, systems and processes into one command and control center
- Increased safety for passengers and staff by integrating all security systems such as station, trackside and onboard CCTV, access control systems and fire systems
- A reduced impact from incidents by fostering greater collaboration between operation, revenue protection, maintenance and security teams reducing lost customer minutes
- Visualize your passenger, network, schedule

and ticketing data through our customizable dashboards to give you deeper insights into to meeting operational KPIs

- Supports emergency planning, policing operations, criminal, SPAD and other investigations.
