

R I V A[®]

... more than standard

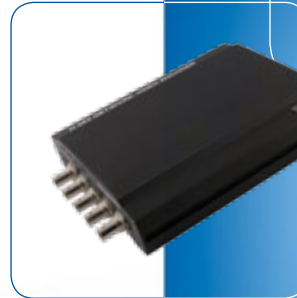

Enjoy the benefits of high experience, quality and service with products by RIVA.

More experience Our Team has more than 25 years of know-how in video security solutions. We are experienced CCTV specialists who focus primarily on network-based video technology (IP video) and surveillance systems. This allows us to offer our partners international service.

More quality The RIVA product range comprises powerful and universally deployable surveillance cameras and servers for both indoor and outdoor use. RIVA box cameras, dome and PTZ dome cameras, IR and bullet cameras are bound to impress with their excellent image quality.

More than standard Elements that may be unavailable with other cameras, or are unreasonably expensive, are already a standard at RIVA.

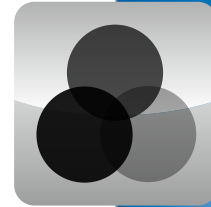

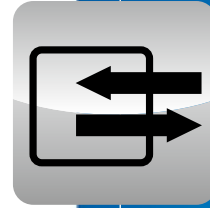

That's why **RIVA** stands for **R**ealtime **I**ntelligent **V**ideo **A**nalytics, an intelligent 3D video analytic system which is already installed in all devices. The "onboard"-video analytics – Powered by VCA Technology – can be set up quickly and simply via the intuitive 3D graphic interface. It also offers a wide selection of innovative analysis filters.

Powered by...

■ Due to self-learning algorithms, the camera automatically adapts to changes in the environment. This means that changes in lighting conditions caused by cloud formation, for example, or repetitive events such as the movement of leaves on trees are simply ignored.

A sensible additional benefit which can be activated when needed. And all that at the price of a standard camera.

... more than standard

More applications

The right solution for every need. That is the RIVA philosophy. Whether in supermarkets, at petrol stations, in banks, at airports or in multi-storey car parks, RIVA offers professional solutions for all kinds of applications.

Depending on the required application, even highly sophisticated solutions such as selectively observing the flow of people, crowds or traffic, or precisely analysing the frequency of visitors and parking times are possible with intelligent video analytics.

On top, market research and data collection can be conducted quickly and easily. Product placements, shop window decorations and much more can be effectively optimised using our equipment.

More savings potential

The integrated "onboard"-video analytics offers major savings potential. Using different filters, the camera only transfers what is requested and is thereby avoiding continual transmission of large volumes of data. This relieves any strain on networks and computers and prevents the need for large amounts of memory and storage - especially costs are reduced.

Even false alarms can be avoided thanks to predefined target IDs for people, vehicles or other objects.

More

Service The RIVA team offers fast, professional and outstanding technical support you can rely on – worldwide.

Please contact the RIVA Team for further information; we are always here for you.
