

LIGHTHOUSE

AI POWERED SOCIAL MEDIA THREAT MONITORING

Lighthouse is powerful tool for police departments and school districts. Powered by patented Artificial Intelligence (AI), it monitors social media in a defined geographic area and identifies potential threats and public safety issues.

Lighthouse is customizable and can monitor for things such as individuals that may pose an active shooter threat, cyber bullying in schools, sexual predator indicators, and other illegal activity of concern.

Lighthouse uses highly accurate geo-fencing to precisely collect threat intelligence from within those areas. Privacy concerns are alleviated, as Lighthouse only collects information that meets the threat thresholds established by the client. This is all possible due to the powerful and customizable patented AI powering Lighthouse. Leveraging this powerful and cutting edge AI with built-in Automatic Language Detection & Translation (ALD&T), Natural Language Processing (NLP), Object & Facial recognition, Video/Image & Audio processing, Geospatial capabilities, and sentiment/emotion detection & analysis, Lighthouse provides 24/7 coverage of Publicly Available Information (PAI) while only collecting threat information.

Lighthouse is deployed with customizable dashboards to visualize the threat information. Lighthouse also has the ability to establish threat alerts via text message, email, or automated phone calls. Knowing of potential problems allows authorities to take action in advance and prevent dangerous and harmful situations for the public. Let us tailor Lighthouse to fit the specific needs and concerns of your community.

Automated Alerts

Push notifications send real-time alerts to immediately notify you of potential threats or triggered situations arise, allowing you to act on them quickly and effectively.

SHADOW DRAGON

AI Video Surveillance

Shadow Dragon autonomously monitors surveillance video and alerts you to threats and other situations as defined by the clients. Powered by Argos Artificial Intelligence (AI), Shadow Dragon has machine vision capabilities that are second to none. With facial recognition and 1000+ object recognition categories, it is a true force multiplier for security video surveillance, overhead imagery, and overhead full motion video (FMV).

If you utilize security video surveillance for buildings, events, stadiums, or otherwise Shadow Dragon is a true force multiplier. With the advent of drone technology and overhead FMV, Shadow Dragon provides lightning fast autonomous analytical capabilities.
